

Fellowship Information:

- The regional anesthesia fellowship program provides additional training in performing regional anesthesia to physicians who have completed residency training in anesthesia. This is not an ACGME certified fellowship.
- Fellows will rotate through UCSF Moffitt/Long hospital, Mt. Zion and the Orthopedic Institute and participate in performing various nerve blocks. The fellow will also spend 4 weeks with the acute pain service and participate in patient care along with the residents and the attending.
- Fellows will obtain a Clinical Instructor appointment from UCSF and work in the operating room as an attending two days a week which will provide salary support, and will be available three days a week for regional anesthesia activities. These activities will include performing nerve blocks, supervising residents with nerve blocks, research and educational activities.
- Research activities include designing new projects and ethics board applications, participation in ongoing research projects, patient recruitment, poster presentation and local and national meetings, and writing manuscripts for publication.
- Educational activities include teaching residents and aiding with nerve blocks, developing teaching modules and materials, journal club for regional anesthesia and other creative teaching ideas.
- Graduating fellows are expected to show proficiency in both single shot and catheter-based regional anesthesia techniques for both upper and lower extremity surgical procedures as well as some trunkal blocks. Fellows should also demonstrate the ability to devise an evidence-based anesthetic plan for a complex orthopedic procedure with particular attention to intraoperative and postoperative analgesia.
- Applicants are required to submit the following items:
 1. Current CV
 2. Three letters of recommendation
 3. Online fellowship application
